Product Education *Playbook*

Seven chapters.

I Discover

II Map

III Plan

IV Make

V Ship

VI Proof

VII Working together

The video is half the job.

Who it's for, what it teaches and where it's placed decide whether anyone learns from it.

The video	The audience, the plan, *the placement*

BEFORE YOU START

Users sign up. *Few reach value.*

Most SaaS products are clear to the team that built them. New users still get stuck, and they rarely ask for help.

▲ No path.

New users don't know which feature to learn first.

▲ No answers.

Support writes the same reply again. Sales demos the same workflow on every call.

▲ No updates.

Features ship. Customers don't notice them.

Five stages. *One sign-off each.*

Each stage ends with one thing you approve before the next one starts.

01

Discover

ICP map
Product, audiences, where users stall.

02

Map

Value map
Features and roadmap, tied to audiences.

03

Plan

Content plan
Series, scripts and storyboards.

04

Make

Finished videos
Recording, motion, voice, edit.

05

Ship

Delivery kit
Cuts and placement for every channel.

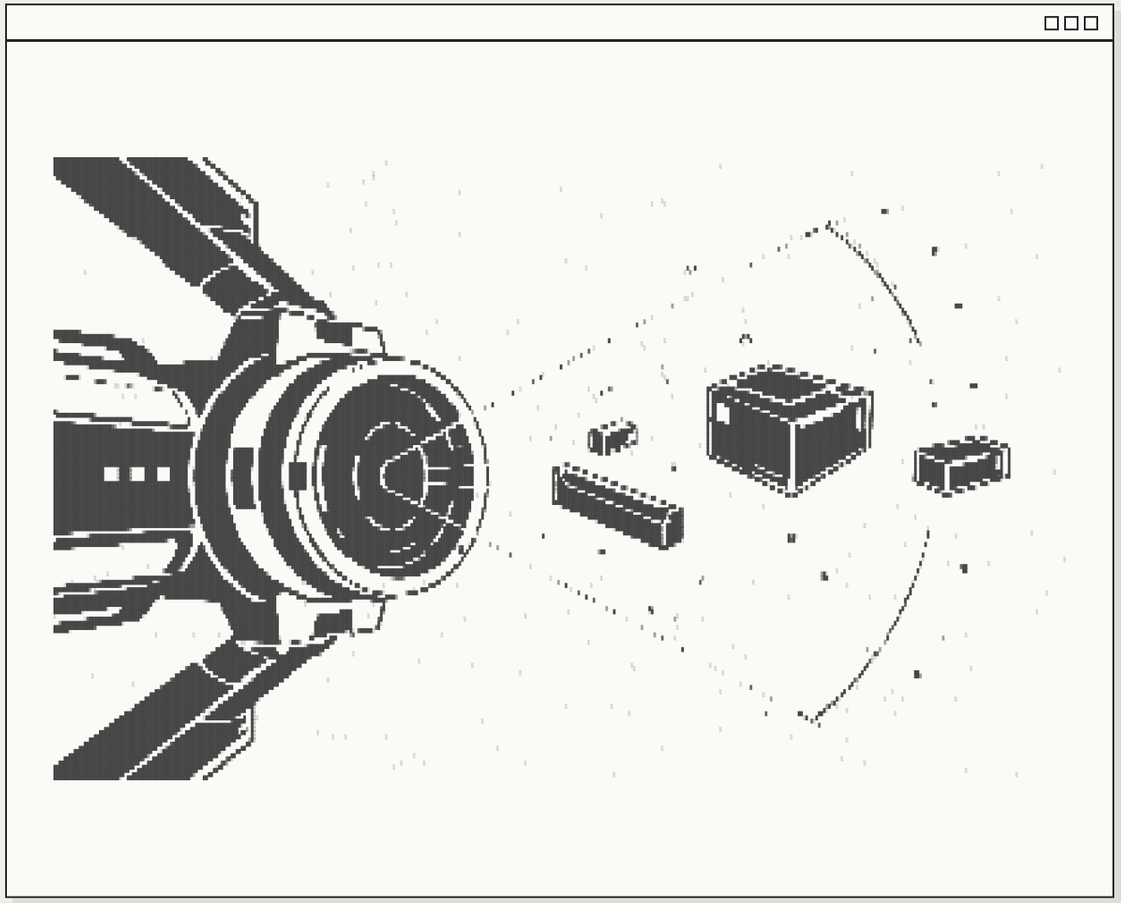

One team, *brief to delivery*.

Audience first, *video second*.

Planned for your *roadmap*.

Chapter I

Discover

Four inputs *before the script.*

We review your product, docs, support tickets and sales calls. Then we agree on these four things with you.

Product.

What it does, in a line a new user would repeat.

ICP.

Who uses it, by role and industry, and the job they need done.

Features.

What is live today, and which ones users miss.

Roadmap.

What ships next, so the library has room to grow.

Start with *one audience.*

A library for everyone teaches no one. We rank 2 to 5 audiences and start with the one where users stall most, or where the most revenue is at stake.

- ✓ Who buys, and who uses
- ✓ Where they stall today
- ✓ What outcome they care about
- ✓ Which audience goes first

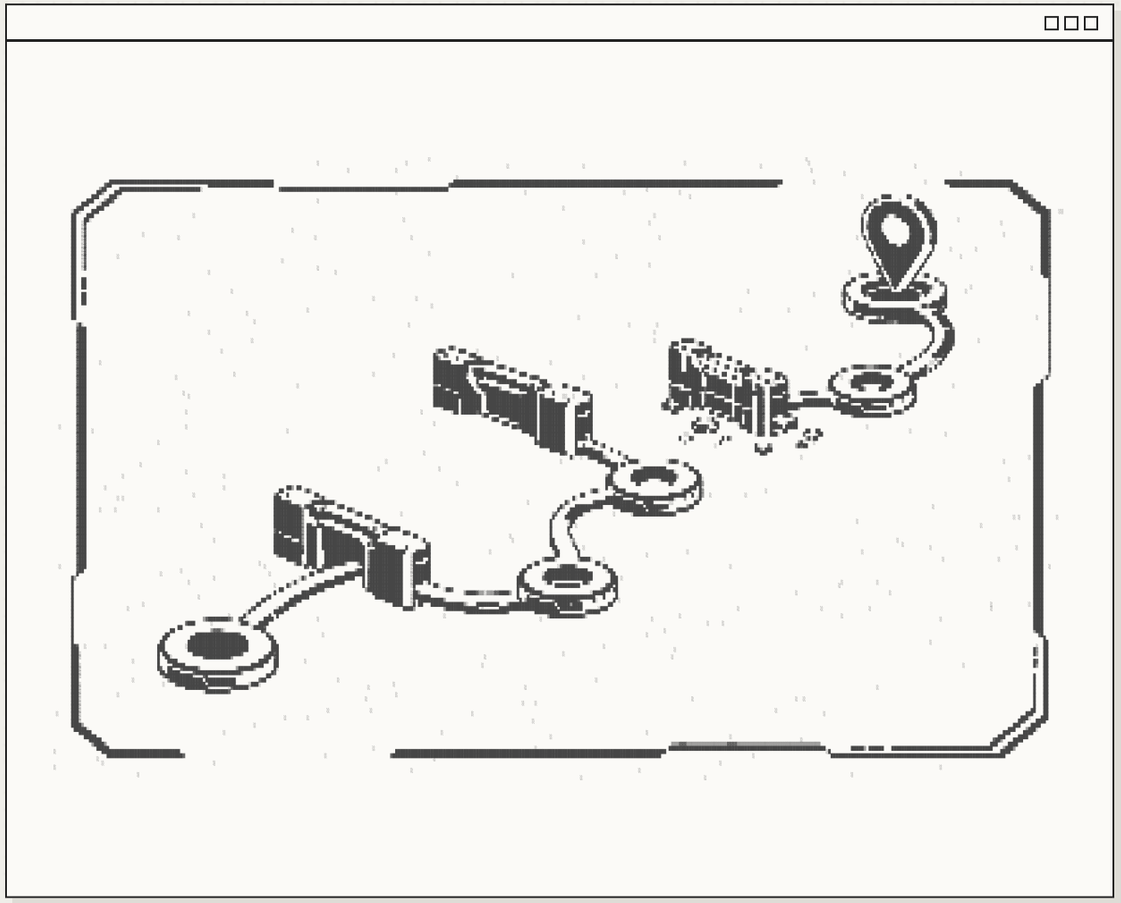

ICP map · example

AUDIENCE	WHERE THEY STALL	PRIORITY
New admins	Workspace setup and permissions	● First
Ops managers	Building their first automation	● Second
Agencies	Sharing work with clients	● Third
Team leads	Reporting and dashboards	○ Later

ILLUSTRATIVE EXAMPLE FOR A PROJECT-MANAGEMENT SAAS

Chapter II

Map

Every feature, *tied to a video.*

We list what's live and what's next, then tie each feature to the audience it serves and the video that teaches it.

Value map · example

FEATURE	STATUS	FOR	OUTCOME	VIDEO
Workspace setup	Live	New admins	First project live on day one	Academy lesson
Automations	Live	Ops managers	Hand-offs run without follow-ups	How-to + tutorial
Client portal	Live	Agencies	Clients approve without email	Industry tutorial
AI summaries	Next quarter	Team leads	Weekly status without a meeting	Release video
Monthly updates	Ongoing	All customers	They see what shipped	Changelog video

ILLUSTRATIVE EXAMPLE FOR A PROJECT-MANAGEMENT SAAS

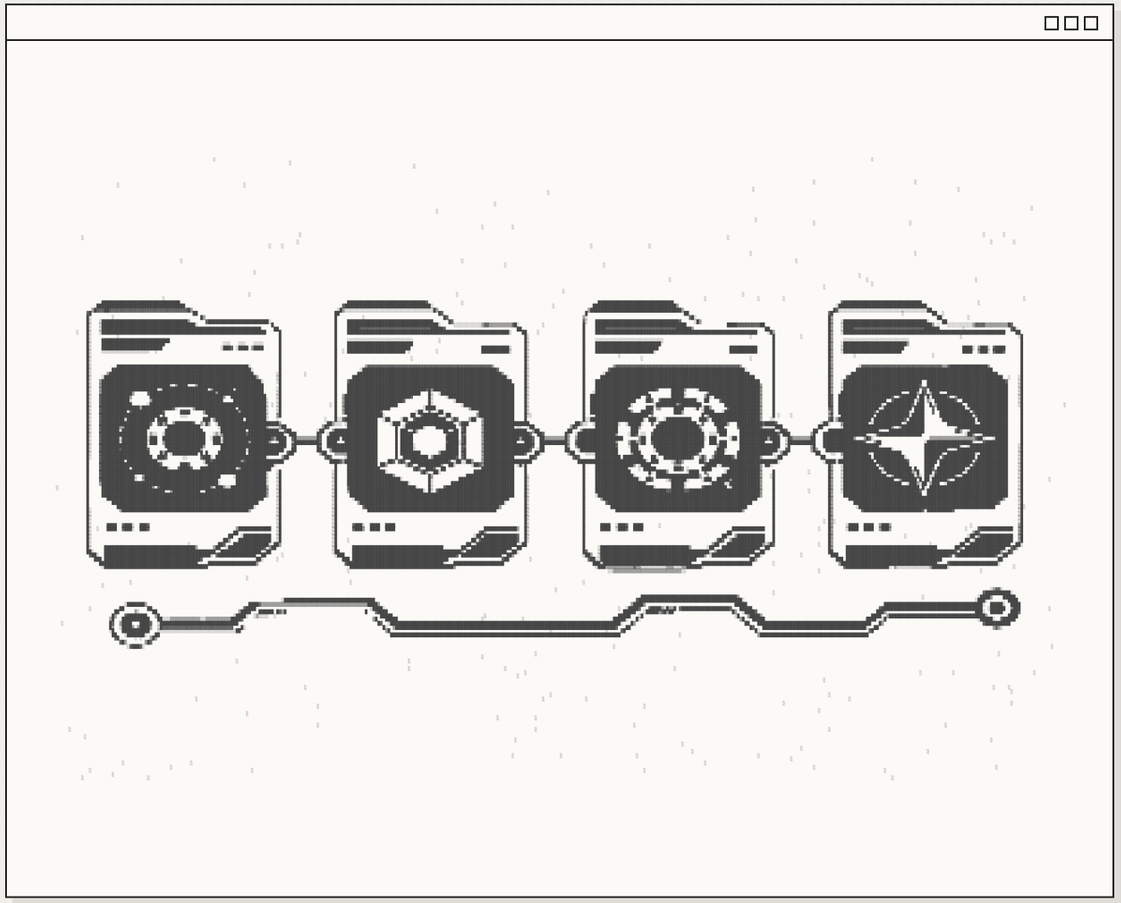

Plan for what *ships next.*

Your product will change. We plan the library so new features slot in without remaking what's already done.

LIVE TODAY	**Academy and how-tos** The core lessons every user needs.
NEXT QUARTER	**Feature release videos** Scripted ahead of the launch date.
EVERY MONTH	**Changelog videos** A short roundup of what shipped.
WHEN UI CHANGES	**Updates to existing videos** Rebuilt UI is quicker to update than raw screen recordings.

Chapter III

Plan

Five kinds *of video.*

Most teams start with one and add the rest over time. Each one covers a different moment in the customer's life.

01

Product Academy

6 to 12 lessons from first login to confident use.

ONBOARDING

02

ICP tutorials

Workflow deep dives for one role or industry.

EVALUATION, EXPANSION

03

How-to videos

Short answers to one question each.

EVERYDAY USE

04

Feature releases

One video per major feature.

LAUNCH DAY

05

Changelog videos

A monthly roundup of what shipped.

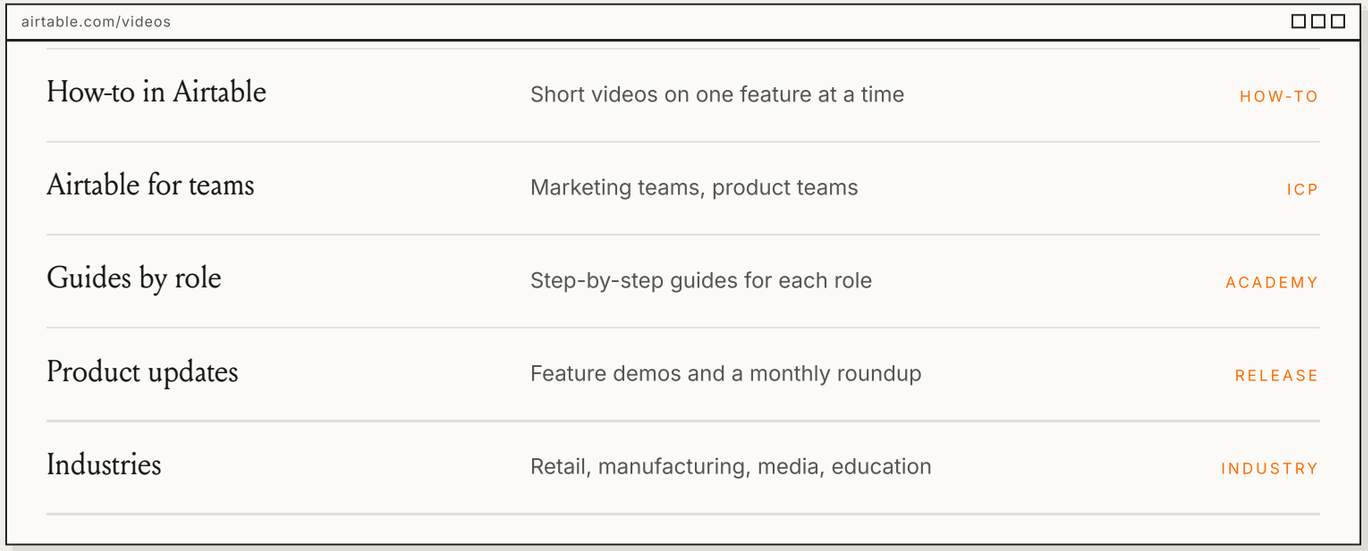

EVERY MONTH

EXAMPLE: AIRTABLE

A full library, *by reason to watch.*

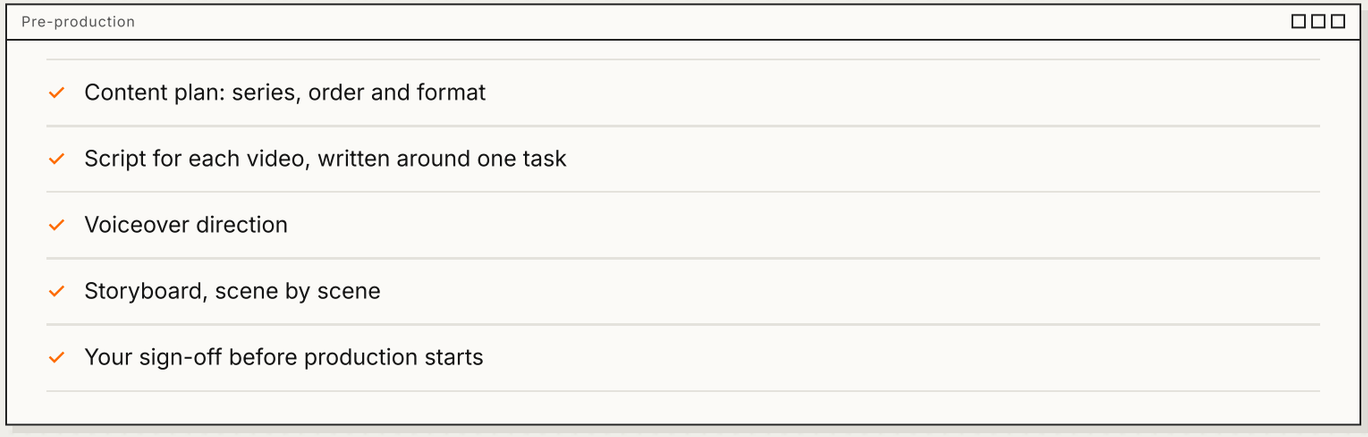

Airtable's video centre groups videos by why someone is watching. You don't need all of it on day one. You need the first series for your biggest audience.

SOURCE: AIRTABLE.COM/VIDEOS AND AIRTABLE.COM/GUIDES

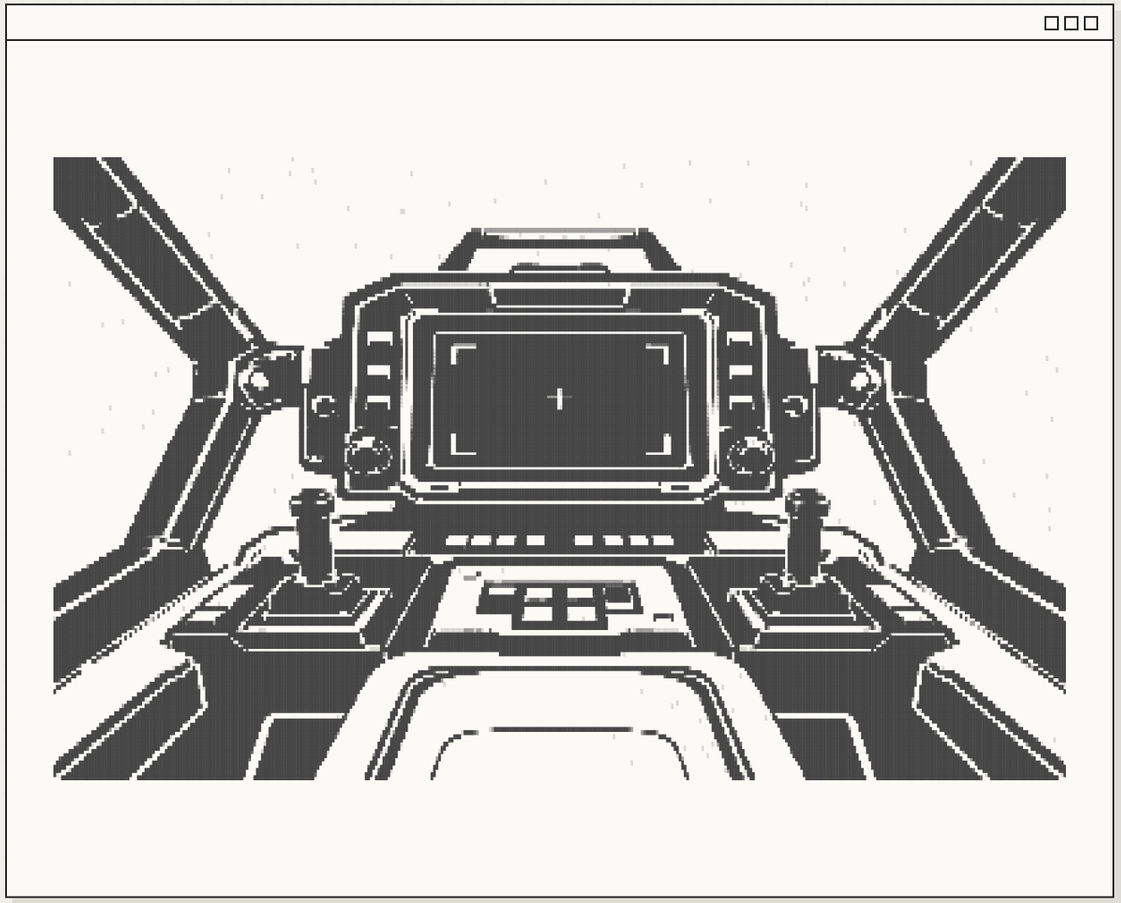

Every video *on paper first.*

Each script follows a real task from start to result. Not a tour of the menu.

Chapter IV

Make

Two ways *to make it.*

We pick the format by audience and topic. Many libraries use both.

Format A

Product in motion

For tutorials, how-tos and release videos.

- Screen recording of your product
- UI rebuilt and simplified in motion
- Voiceover, captions and music
- No one needs to be on camera

Format B

On camera

For academy intros, founder updates and expert-led lessons.

- Your team or an expert explains
- Shoot support, or full production
- Product shots cut in where needed
- Edit, captions and sound

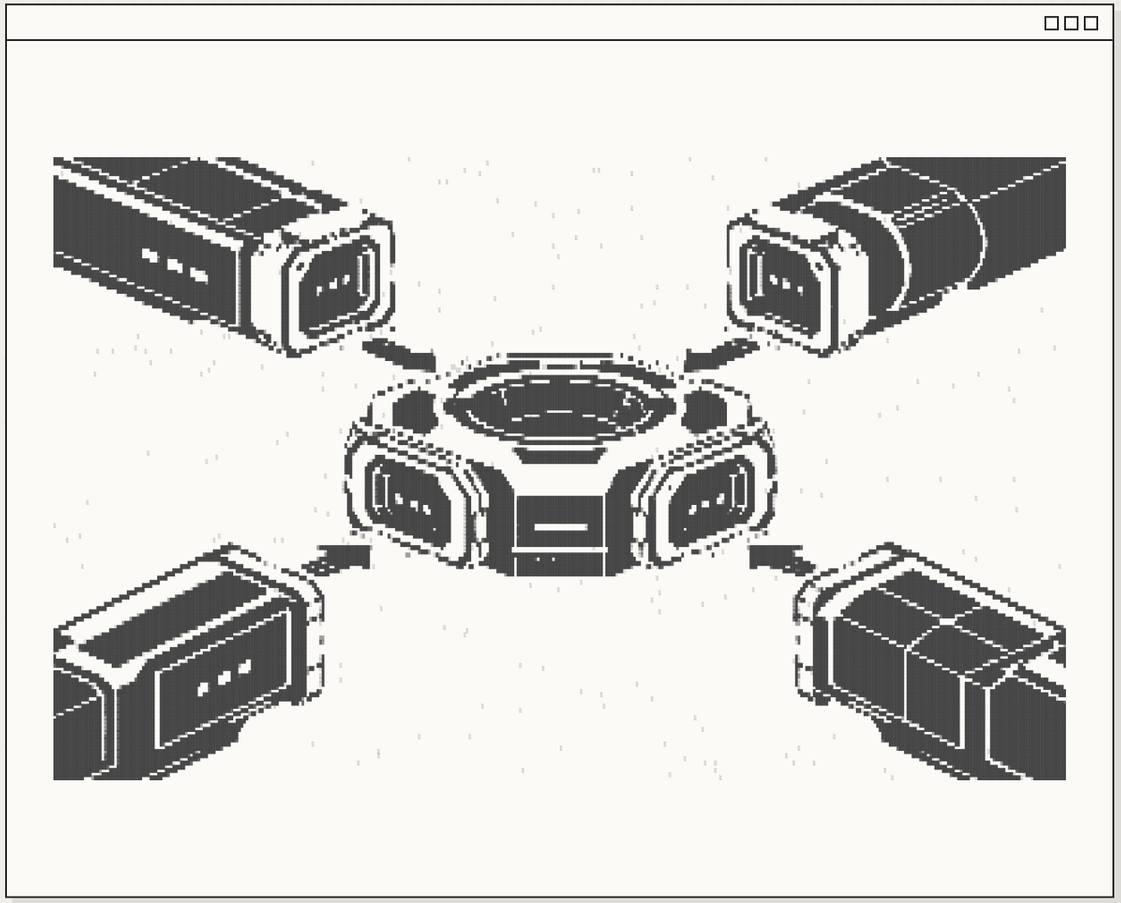

One video, cut *for every place.*

Delivered together, so each video is ready for every place it will be used.

Chapter V

Ship

Where each video *does its job.*

A video only works where users are when they need it.

01

Onboarding

Academy lessons in welcome emails and the first-run flow.

02

In-app

Short clips next to the feature they explain.

03

Help centre

A video at the top of each key article.

04

Customer success

Links sent instead of repeat calls.

05

Sales

Tutorials in follow-ups after a demo.

06

Launches and social

Release videos for email, YouTube, X and LinkedIn.

After launch, the *library keeps working.*

New features join the library on a steady schedule.

What we track with you

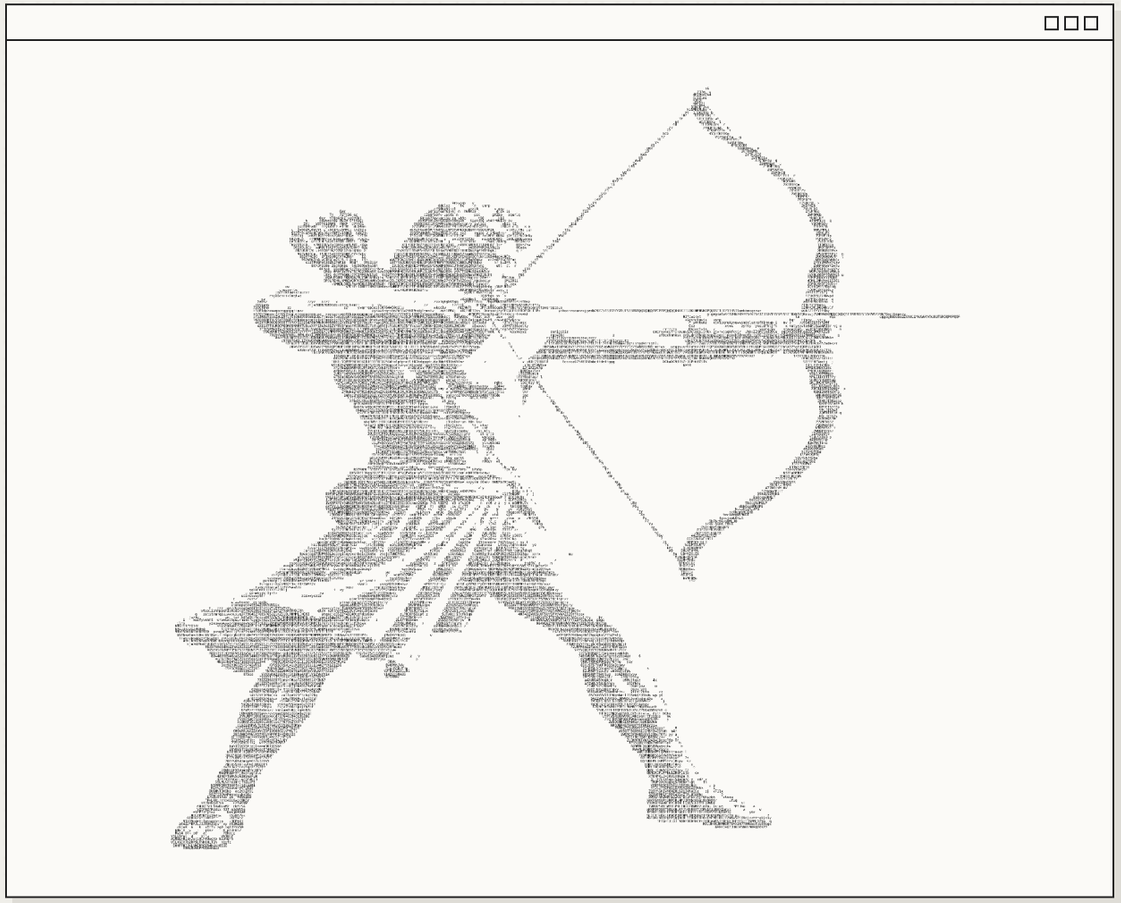

- Views and watch time
- Support tickets on covered topics
- Feature adoption after release
- What to make next

What gets added

- A release video per major feature
- A monthly changelog video
- New how-tos from support questions
- Updates when the UI changes

Chapter VI

Proof

PILLIR

4 product education videos.

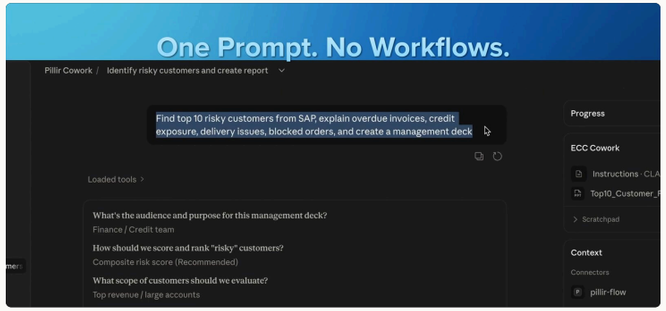

Pillir connects AI agents like Claude to live SAP data. We made four workflow videos, each showing one real task from prompt to finished report.

Three of them are the product demos on pillir.ai.

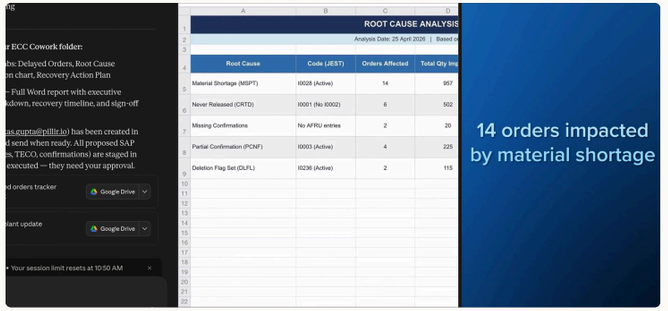

"The quality of work was outstanding. Their team understood our product deeply and delivered beyond expectations."

Vijay Raghavan, Director of India Marketing & Operations, Pillir

Workflow videos

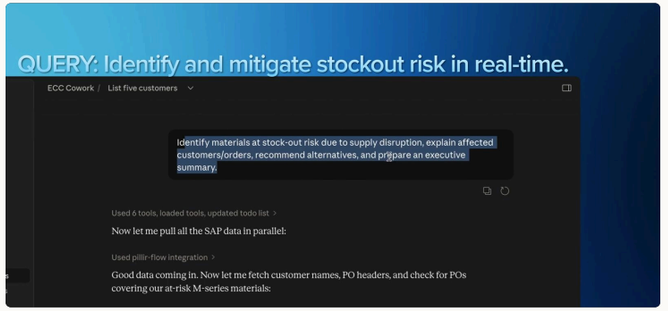

Customer risk — 90 sec Watch ↗

Delayed production — 97 sec Watch ↗

Stuck requisitions — 91 sec Watch ↗

Stockout risk — 55 sec

Questions teams *ask first.*

Do we need to be on camera?

No. Product-in-motion videos work without anyone on screen.

Who writes the scripts?

We do. Your product expert reviews them before production.

Can we start small?

Yes. Most teams start with one series for one audience.

What do you need from our product?

Access to the product or a demo account with realistic data.

What happens when our UI changes?

We update the affected scenes. Rebuilt UI makes this quicker.

Who publishes the videos?

Your team. We deliver every cut ready to upload.

Five things *from your side.*

1. Access to the product, or a demo account
2. Your brand kit
3. Your roadmap for the next two quarters
4. One decision-maker
5. A product expert for script review

How to start

Book a 30-minute call

calendly.com/rebluesagency/30min

Quote and proposal

Based on your audiences and the first series.

Discovery starts

ICP, features and roadmap, mapped with your team.
